

PALLA JANAKIRAM

DATA ANALYST

SQL | PYTHON | EXCEL | POWER BI

Hyderabad, Telangana | +91 9866804339 | janakiram.palla01@gmail.com | [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst with 2+ years of experience preparing, validating and analyzing structured operational datasets for reporting and decision support. Uses SQL, Python/Pandas, Excel, Power BI and PostgreSQL to build KPI dashboards, investigate discrepancies and communicate actionable insights. Portfolio work includes PySpark, automated data quality and independently validated analytical outputs.

TECHNICAL SKILLS

Analytics: SQL, Python, Pandas, NumPy, Advanced Excel, data cleaning, transformation, validation, EDA, KPI analysis, root-cause analysis | **Reporting and BI:** Power BI, DAX, Power Query, dashboards, data visualization, dimensional modeling, data storytelling | **Data Platforms:** PostgreSQL, PySpark, Apache Spark, Delta Lake, dbt, incremental processing, automated data quality | **Tools:** Git, GitHub, ChatGPT, Microsoft Copilot; independently validated outputs

PROFESSIONAL EXPERIENCE

Senior Associate | Tech Mahindra

Mar 2026 - Present

- Analyze and validate high-volume structured operational datasets against specifications and business rules, maintaining accuracy across recurring quality workflows.
- Monitor complex data attributes and perform consistency checks to identify exceptions, incomplete records and conflicting values.
- Investigate discrepancies and root causes, document findings and coordinate corrections with cross-functional teams.

Analyst | Blue Dome Technologies

Jan 2024 - Dec 2025

- Extracted, cleaned, transformed and validated multi-source datasets using Python, Pandas and Excel, producing analysis-ready outputs and structured reports.
- Profiled and reconciled asset attributes, GPS/KML records and source imagery to identify missing, duplicate, anomalous and inconsistent records.
- Applied business-rule validation and quality audits, prepared analytical datasets and structured reports, and coordinated resolution of recurring data exceptions.

SELECTED PROJECTS

FinTrust Banking Intelligence | End-to-End Banking Analytics & Modern BI Platform

2026

- Created banking KPI reporting across customers, transactions, deposits, lending, fraud, collections, churn and branches for operational and executive decision support.
- Used SQL and Python/Pandas to clean and reconcile 257,969 records, including 5,000 customers and 120,000 transactions.
- Built a six-page Power BI dashboard with DAX, Power Query, drill-down analysis and KPIs for portfolio risk, digital engagement and branch performance.
- Added a locally validated PySpark/Delta Lake pipeline with incremental processing, dbt tests, automated quality controls and Airflow DAG design.

MediCore Healthcare Analytics | Healthcare Revenue, Patient Flow & Operational Intelligence

2026

- Integrated and analyzed 500,000 appointments and 300,000 encounters using PostgreSQL, SQL and Python/Pandas to create a centralized view of patient flow and hospital performance.
- Cleaned and validated healthcare data, performed EDA and calculated KPIs including 9.81% no-shows, 62.86% collections, 62.18-minute waits, 74.61 satisfaction and 3.65% readmissions.
- Built Power BI and Plotly Dash reporting for revenue and collections (₹178.13 Cr billed; ₹111.98 Cr collected), no-shows, patient experience, wait times and readmission risk.
